

Installation options

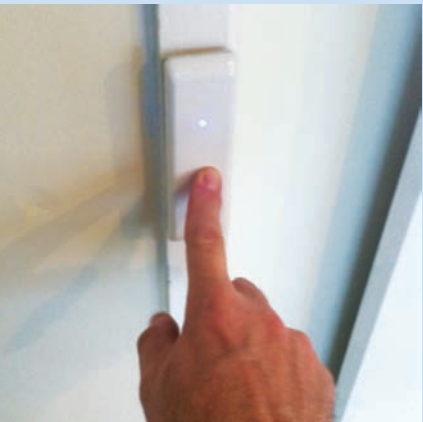

TOP MOUNT, OVER CLEAR OPENING

TOP MOUNT, OVER FIXED PANEL

BOTTOM MOUNT

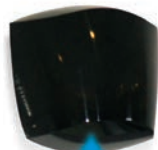

The Autoslide system is activated by pressing a wall-mounted, wireless push button which comes in the standard Autoslide kit. Sensors are available as an option.

Maximum door weight	50kg (110 pounds)
Colours	Black or white
Maximum door width	960mm (37 inches)
Power supply	110-240 VAC, 24V DC Power adapter
Safety cut-off	Yes
Automatic to manual mode	Yes
Autoslide physical size	Length 490mm (19 inches) Height 70mm (2.75 inches) Width 65 (2.5 inches)

Sensors (optional)

Autoslide's optional sensors activate the Autoslide system, making your sliding doors open automatically. With a sensor, there is no need to press a button to open your sliding door.

Our specifically developed state-of-the-art infrared laser sensors help prevent the closing of your doors on persons or objects in the area of the door when closing. Pet sensors are also available. Autoslide sensors are for domestic use only.

Note: Autoslide is designed for domestic use only in home applications. The manufacturer does not recommend Autoslide for commercial or industrial use. Existing door must be free-running with minimal friction and no obstructions. Existing lock latching must be disengaged while autoslide is in operation. When fitting to an existing fly screen, floor mounting installation only to be used.

AUTOSLIDE™

The Residential Automatic Sliding Door System

Convert your existing sliding door into a **FULLY AUTOMATIC** sliding door!

www.autoslide.com

AUTOSLIDE™

A convenience to some, a necessity to others.

Available in black or white.

Autoslide is an automatic sliding door system which can be attached to your existing indoor or outdoor manual sliding doors, enabling them to open and close automatically.

- 5 star energy rating
- Save on air-conditioning costs
- Keeps flies and insects out
- Makes entertaining easier
- Great for pet owners

Entertaining just got a whole lot easier

No more putting down and picking up big plates of food every time you need to go outside.

How does it work?

Autoslide is a compact DIY system, consisting of a motor, electronic controller and a low-voltage power supply, encased in a sturdy, aluminium slim-line housing.

The automatic opening of your sliding door is then activated by wall-mounted, wireless push buttons which are installed on either side of the door. Infrared sensors are also available as an option, so you don't have to use buttons.

Sliding screen doors

Autoslide fits to almost all sliding screen doors too. No more flies and mosquitoes entering or kids leaving the screen door open.

No need for costly, unsightly pet doors

With "Pet Mode" your pets can come and go freely without any human assistance. And with the additional pet sensors, you can program Autoslide to open specifically to your pet's size.

Easy access for those with special needs

Autoslide greatly improves access for the elderly or disabled and people who live with assisted living.

Internal sliding doors

The Autoslide system will fit to most existing or new internal cavity/pocket sliding doors. Autoslide creates super easy access between the garage and the house or any rooms inside your home which have sliding doors.
